Monetization-ready data delivery engine

Enables seamless distribution of connected data via APIs, endpoints and data portals, with integrated subscription and access controls.

Customizable data licensing models

Supports tiered pricing, subscription-based access, pay-per-use models, and partner-specific agreements to match diverse monetization strategies.

Bespoke flexibility

Built on a modular reference architecture, it adapts seamlessly to your needs and integrates with your existing IT landscape.

Databoostr
Fueled by grape up

A scalable, secure platform allowing to package, license, and deliver data to partners and customers.

Databoostr integrates seamlessly with an OEM's connected product ecosystem, enabling scalable delivery of product usage data.

Data ingested from existing sources is filtered, packaged, and securely delivered to authorized customers and partners via streaming connectors and REST APIs.

OEMs maintain full control over data access and flow, with built-in tools for usage monitoring, access management, and billing support.

Key features

Data streaming endpoints

Deliver live data to partners and customers in near-real time.

Data access APIs

Provide on-demand access to historical data records, from full datasets to single data points.

Data catalog management

Organize data assets with rich metadata to simplify discovery and reuse.

Data filtering

Provide granular and controlled access to relevant subsets of data.

Secure payments integration

Enable streamlined payment processing for customers purchasing access to your data.

Remote commands

Allow authorized clients to trigger actions or control connected assets via APIs.

Auditing and usage tracking

Gain transparency into data access patterns and consumption metrics.

Advanced analytics and insights

Deliver value-added services by applying analytics to raw data.

Partner and developer portals

Empower third-party collaboration with self-service tools, documentation, and API keys access.

Turn your data into a revenue-driving asset

Databoostr supports flexible monetization strategies, licensing models, and delivery channels — all while ensuring secure, seamless access for data buyers and partners.

Offer enriched data-driven services

- Health & status monitoring for infrastructure and connected devices.
- AI-driven diagnostics and fault detection in IoT and connected environments.
- Behavioral scoring and usage analytics for insurance, leasing, or financial services.

Enable third-party developer ecosystem

- Offer premium API access with higher request limits and throughput.
- Provide real-time data streaming APIs to power instant analytics.
- Enable AI-driven data processing and transformation through APIs.

Deliver aggregated data for macro-level insights

- Provide traffic, energy usage, and behavior insights to municipalities and planning firms.
- Deliver enhanced customer risk scores and characteristics to insurers.
- Supply logistics and transportation companies with fleet tracking, fuel efficiency, and operational insights.

Let's explore how Databoostr can work for your business!
